

Triage, Treat, and Qualify Transports.

Quality improvement and cost reduction is the framework for viable healthcare across the continuum. The RelyMD EMS solution lets EMS systems become more efficient by providing the most appropriate care, at the right time, and in the right place. Reducing avoidable transports to emergency departments and triaging to alternative destinations is easy using the right telehealth partner.

Emergency-Level Guidelines for In-Place Treatment

Our 24/7 physicians and proven clinical guidelines support your EMS team in decision making and help carefully craft high-quality in-place care plans for patients who don't require transport. These evidence-based guidelines ensure your EMTs stay on the road and prioritize time-consuming transports for appropriate emergency services.

Care Coordination Protocols for Recommended Transports

The ability to connect patients with the most appropriate level of care, whether it's a hospital, urgent care, or primary care physician, will improve your system's efficiency while providing patients with broader access to the care they need. RelyMD's care coordination protocols map to a large breadth of community-based providers and work to efficiently triage patients to the right care setting of any acuity and improve continuity of care with proper communication across channels.

Wake County EMS Pilot

90%

Unnecessary transports avoided with telehealth.

"This program was successful and made a positive impact all around. Providing on-the-spot-care through telemedicine is the right thing to do for low-acuity visits. It's a win-win for the medical community."

Brent Meyers
Former Wake County EMS
Director
